

ABOUT THE ORGANIZATION

MyHealthDirect (MHD) was founded in 2006 with a mission to transform healthcare delivery through cloud-based appointment scheduling solutions. MyHealthDirect focuses on making it easy for people to schedule healthcare appointments across digital channels to the right provider at the right time. Each solution is configured to complement existing workflows, integrate with PMS/EMR/HIS applications and enhance our partner's brand, provider and patient experience. MyHealthDirect solutions collect available appointments from providers and allow providers to configure business rules that allow the right access, *not open access*, to those appointments across the desired booking sources. The objective: make action easy at every patient encounter.

SUMMARY OF POSITION:

MyHealthDirect is experiencing significant growth and is seeking a talented, passion-driven individual to enhance the talent and of our development team. The Senior .NET Developer will work closely with the Architecture team to design, build and refactor our application offerings to provide innovative and high quality solutions that enhance our customer's satisfaction. This position will require analysis and recommendations for improvement to current systems, applications and technologies to improve reliability, performance and maintainability. This position is a technical leadership position our organization, which requires leadership and mentorship to other team members. This position is based in Nashville, TN and reports to the Director of Software Development.

RESPONSIBILITIES:

- Build and support a product through the entire lifecycle of analysis, design, coding, testing and support
- Design, implement and support high quality and innovative software solutions that exceed customer expectations
- Author and execute unit and system level testing on applications
- Participate in architecture discussions
- Serve as a mentor to junior developers

PREFERRED SKILLS/EXPERIENCE:

Ideal candidate must be self-motivated with a proven track record building high quality, scalable web applications and APIs. Candidates must be creative, organized and analytical as well as adept at working in a team environment.

- Bachelor's degree in computer science/related field or equivalent experience
- 7+ years developing web applications utilizing C#, ASP.NET MVC, jQuery, JavaScript, CSS, HTML
- 5+ years hands on experience with Microsoft SQL Server and SQL
- 2+ years hands on experience with Entity Framework or other ORM technologies
- Experience with REST based API development with XML/JSON
- Experience with Knockout or Angular
- Ability to determine root cause analysis and resolution of complex performance/stability related issues
- Ability to work with peers in a highly collaborative, fast-paced environment
- Strong ability to learn quickly and adapt to change
- Strong listening, detail-oriented thinking, and creative problem solving skills
- Experience working within an Agile/Scrum/Kanban/Lean environment
